

## Credentials & Data Security - Solution Brief

# Active Directory Security

Over time, Active Directory has grown increasingly complex, less secure, and more difficult to manage, resulting in a growing problem for organisations large and small. Our AD Security solution provides one of the most comprehensive collection of auditing, analysis, reporting, and remediation capabilities available for Active Directory.

### Key Features

#### Active Directory Auditing

Collect information on anything residing in AD, from objects and their attributes to Group Policy Objects, configurations, group memberships, domains, sites, trusts, and more.

#### Active Directory Reporting

Leverage dozens of preconfigured reports or create completely custom reports in seconds using powerful analysis and reporting engines.

#### Active Directory Governance

Calculate and assign group ownership, perform automated membership reviews, and enable self-service group management and membership requests.

#### Azure Active Directory Visibility

Obtain deep visibility into your Azure Active Directory environment with preconfigured reporting around user and group configurations, conditions, stale objects, synchronisation status, and more.

While most organisations focus on analysing and controlling access to the data and resources that Active Directory facilitates access to, they often lack visibility into the security of AD itself and the myriad of tactics, techniques, and procedures attackers have developed to compromise the very core of any organisation's IT infrastructure. For attackers, AD is in the crosshairs because it is the path of least resistance to virtually everything of consequence.

With huge increases annually in data breaches and cyber attacks and average cyber incident remediation costing up to £4m, the security of Active Directory (AD) has never been more important. Constantly under attack and more complex than ever to manage, it is critical that organisations have the right tools and visibility to efficiently manage and effectively secure AD.

It is easy for even the best administrators to miss security vulnerabilities and get lost in a sea of objects, users, computers, groups, permissions, etc. To properly manage and secure Active Directory we have the capability to deliver a single solution that provides a set of tools for auditing, activity analysis, security assessments and comprehensive reporting.

AD is secure and efficient when it's clean, understood, configured properly, monitored closely, and controlled tightly. Our industry-leading Active Directory security and management solutions enable organisations to effectively manage and secure Active Directory at the levels required to mitigate the risks of advanced attacks, compliance failure, and operational outage.

### About NG-IT

NG-IT is a privately held IT Solutions partner providing next generation cloud infrastructure and cloud security. Our aim is to provide peace of mind for our customers so they remain focussed on managing and growing their business.
