

Securing the Cloud - Solution Brief

Cyber Threat Intelligence

Cyber threats are constantly evolving, and organisations need to understand who is likely to attack what and how if they are going to stand a chance of defending against adversaries. In order to understand cyber threats correctly it is necessary to collect and analyse huge volumes of disparate information.

Key Features

Flexible Solution

Multiple subscription tiers provide varying levels of service and functionality to meet differing challenges and needs

Threat & Vulnerability Data

Combined understanding of the threat to any company with a detailed insight into the current vulnerability of that entity to an attack produces an accurate projection of the entity being successfully breached.

Actionable Information

- Web facing security posture
- Breached user credentials
- Deployed technology vulnerabilities
- Sector specific threat activity
- Leaked data & dark web

Traditional Cyber Threat Intelligence providers focus on delivering huge volumes of data to their clients, but not the understanding that makes the data useful. Most organisations have limited internal analytical teams and do not have the time or resources to make sense of huge volumes of data.

Our cyber threat intelligence solution focuses on providing clear and specific information within the three fundamental areas of tactical, operational, and strategic intelligence. Threat information detailing current and evolving attack techniques, likelihood of attack against specific industry and organisation, previously leaked data and critical infrastructure vulnerabilities is provided and incorporated into dashboards and reports that allow stakeholders to better understand the threat to their business, the potential impact of an attack and make better strategic decisions.

This powerful and award-winning threat intelligence platform collects huge volumes of cyber threat data from an unrivalled breadth of sources which is analysed using Machine Learning and an array of sophisticated technologies combined with our highly-skilled analysts and used to provide real-time invaluable understanding of the cyber threats facing businesses, their trading networks and third parties.

The platform is trusted by major organisations worldwide to help protect their vital assets for it's unique capability to turn data into actionable insights so they can clearly visualise the cyber threats they face and understand the intent and capability that their adversaries have to target them. The platform is highly accredited and is one of only seven companies selected by the Financial Conduct Authority and the Bank of England.
